

The below submission has been lodged and confirmed on the AEMC Web site.

Submission type: Rule change

Reference: Improving the workability of the feedback loop

Organisation: Private individual

First name: [REDACTED]

Last name: [REDACTED]

Comments: This makes no sense. A draft should be just that, awaiting final checking and approval before becoming workable. I am concerned that this will lead to pushing these transmission projects through that are not in the best interests of consumers, and we, the consumers, will suffer increased costs in our electricity bills as a result.

In short, none of this appears to be in the best interest of the consumer and I do not support this.
