

Dear Mr Thomas,

This is my submission letter in relation to the determination and rules for the acceleration of smart meters deployment Draft Legislation.

My concern is that these smart electricity meters emit radiofrequency radiation and some health side effects include tinnitus, headaches and skin irritations. Smart Meters and their technology are of great health concern to me as for example RF radiation is classified by The International Agency for Research on Cancer (IARC) as a Class 2B carcinogen.

The legislation must require electricity companies to compensate any customers who are harmed by their smart meters but if the legislation amends to non-radiation emitting smart meters that would reduce health risks.

In addition, there are privacy issue concerns and most people would not consent to their data being collected especially without people's written consent.

Thank you for taking time to read my submission and I hope my points are taken into consideration.

Yours sincerely,
