Comments: RF radiation has been repeatedly demonstrated to have harmful effects on the body and on other living creatures.

The International Agency for Research on Cancer has classified radiofrequency radiation as a Class 2B carcinogen.¹

Since that time, more evidence of carcinogenicity has been found from both human and animal studies.

All customers must be able to choose non-radiating electricity meters [meters that don't emit radiofrequency radiation] and not be financially – or in any other way – penalised for the choice.

Customers must be given details about what 'data sharing' their electricity provider plans and the opportunity to give or withhold their approval
