

Submission Type: Rule Change

Reference: Accelerating smart meter deployment

Organisation: Private citizen

First Name: Virginia

Last Name: Crabbe

Email: [REDACTED]

Phone Number: [REDACTED]

Comments: I do not consent to having a smart meter on my property. I have family members with serious health issues that have exposed them to more harmful radiation and emfs than any living being should have to endure, constant bombardment from a smart meter hunting for the elusive signal in my area would not be beneficial in any way. I would like to refer you to the writings of Arthur Firstenberg and Mark Broomhall, their research into the impacts of these units and their associated outputs has been long and thorough. The potential for ill effects on all life is far too high a price.

I will happily provide a photo of my meter at whatever intervals the power company require them. A smart meter will not benefit me or alter my energy consumption, the only things I can think of that would benefit the power companies are if a time related fee structure were introduced and the ability to remotely control the connection.

I am a concerned citizen who would like to keep my part of the world as welcoming to the wildlife, animals and humans that currently inhabit the space.
