Subject: Submission Received

The below submission has been lodged and confirmed on the AEMC Web site.

Submission Type: Rule Change

Reference: Improving the cost recovery arrangements for non-network options

Organisation: A member of REZ Resistance

First Name: Carol-Ann

Last Name: Fletcher

Email: [REDACTED]

Phone Number: [REDACTED]

Comments: I OBJECT AND DO NOT CONSENT TO including NNO expenditures in a Transmission Network Service Provider's (TNSP) revenue proposal.

I OBJECT AND DO NOT CONSENT TO having expected costs to be higher than the contractual terms or other already set "expected levels" regardless of whether NNO costs differ or not because of the consumers/taxpayers/constituents having to pay those costs when they are already paying too much for "low-cost renewable energy" electricity that is NOT low cost AND who are unfairly expected to pay for harmful, dangerous and expensive wind turbines and Marinus Link when the NW community has already clearly and soundly said NO (<https://drive.proton.me/urls/3K82SFWQRW#heugmWSRC2pX>)

It is also NOT the consumer's responsibility to fix the cost recovery delay, especially when we are being promised by the government that our electricity bills are going to be \$300 less.

New power bill relief | Ministers (dceew.gov.au)

Of course, Chris Bowen's numbers are dodgy, inaccurate and I feel very irresponsible to the people of Australia whom he, Nick Duigan and Tanya Plibersek are supposed to be serving but that does not seem to stop the hypocrisy

or the pushing of "renewable energy products" at the expense of humans, wildlife and Australian's valuable ecosystems and unique biodiversity.

"We come then to the actual generators that are feeding that system. Each green column there represents one day in the month of May of this year. It is the amount of energy that was produced that day on all of the NEM, that's South Australia, New South Wales, Victoria, Queensland, and Tasmania. Put them all together, and this is the total that we got. CSIRO's GenCost tells us that wind will have a capacity factor of between 29 and 48%. For the month of May over the entire NEM, it had a capacity factor of 20%, and down here it had a capacity factor over a seven or eight-day period of 10%, but it was preceded by 12% here. And in this zone, you never really even got to the point of the minimum line that you could power the grid.

So really all the way from there to there, wind failed Australia. Yet AMO, Australian Electricity Marketing Operator, anyone here not heard of them?

They're telling us that by 2050 we're going to have 26% of this stuff.

How? Sorry, 46. How are you going to handle that day? Even if you multiply it by threefold, you're only up to there. And then we come to the darling of the renewables rollout in Australia, South Australia, where on Twitter I'm told continuously that they've conquered the issue. They're at 100% renewables tomorrow, and you needn't worry. They've proven it and therefore Australia can prove it." Robert Parker - The Nuclear Speech Teals Wanted Cancelled (ipa.org.au).

Therefore,

 <https://theklaxon.com.au/chalmers-gives-frydenberg-free-pass-over-asic-report-stitch-up/>.

(<https://www.sydneysun.com/news/274402407/albanese-government-covers-for-coalition-in-asic-corruption-probe>) Therefore, because wind turbine corporations, AEMO, AER, NEM AND Marinus Link are all under ASIC, wind turbines and Marinus Links are FINANCIAL products rather than "energy" products that will NOT do what the wind turbine corporations, Marinus Link, local Councils, State and Federal Government say they will do. See the below links:

<https://abr.business.gov.au/ABN/View?id=47630194562> - Marinus Link

<https://abr.business.gov.au/ABN/View?abn=94072010327>- AEMO

<https://abr.business.gov.au/ABN/View?abn=73102579788> - NEM

<https://abr.business.gov.au/ABN/View?abn=82629939224> - AER

<https://abr.business.gov.au/ABN/View?abn=99094836263> - Renewable Energy Company Pty Ltd (just one example of an "energy" corporation under ASIC (Australian Securities and Investment Commission), which again, makes wind turbines a FINANCIAL product rather than an "energy" product and nothing more than an extremely dodgy scam that is NOT good for Australia or Australian constituents who are being forced to pay for this SCAM against their will.

<https://www.youtube.com/watch?v=-H0GCeS65uc> Environmental impacts of renewables in Queensland by Steven Nowakowski and Jeanette Kemp

"Taxpayers are entitled to know they are getting value for money from the billions of dollars being spent on projects to enable a transition to lower-emissions energy. Those responsible must not be allowed to write their own rules or forgo the widest possible consultation with those who represent the electricity users and taxpayers who ultimately must pay the bill. This is why FOI documents that detail the extent to which energy planners will go to shape how projects are scrutinised make sobering reading. The Australian Energy Market Operator has sought permission to break the rules and modify outside scrutiny for two crucial transmission line assets, the HumeLink and VNI West projects." Weekend Australian Editorial, More scrutiny, not less on power 31 January 2024
