
FW: Cost recovery arrangements for transmission non-network options

Dear AEMC

As an energy user I am making a submission regarding the cost recovery arrangements for transmission non-network options, and my submission does not support this initiative and therefore I object to this proposal.

This arrangement does not assist the consumer of energy. This arrangement continues the subsidisation of Renewable energy and associated infrastructure. This arrangement by allowing such cost recovery arrangements does nothing but allows big business and foreign owners to invest with the knowledge that the risk has been largely removed by allowing them to recover any short falls from the consumers of energy.

This is a stupid idea and should not be allowed and therefore should not proceed.

A very unhappy energy consumer

I do not donate to political parties.

I am an Australian Citizen and live in Australia.
