

Submission Type: Rule Change

Reference: Allowing DNSPs to charge for exports to the network

Organisation: Nil

First Name: Christine

Last Name: James

Email: [REDACTED]

Phone Number: [REDACTED]

Comments: I think that it is so very very wrong to charge everyday people for importing energy INTO the grid after they have spent their own money installing solar for clean energy, trying to do the right thing for the planet. Something that our government have made clear they have no intention of doing and will go out of their way to not only avoid promoting clean renewable energy but to penalise those individuals trying to do the right thing for the future. Not only will you charge us for giving you free energy, you will then charge us highly inflated prices to buy it back. Big coal and gas generators don't have to pay for supplying electricity into the network, so why should solar homes and businesses who have made a personal investment in rooftop solar? Please reject this proposal to charge Australian households for importing energy into the grid.
