Comments: I am 80 years of age on 23 May 2021 and a self supported retiree. My wife is 74 and retired. In March 2017 I installed a 6.96 kW domestic solar system at a cost of \$9,700.00, changed all my lighting to LED and pruned trees to increase access to the sunlight. I live in Aldgate SA amongst many hills. I had to reduce my annual electricity cost of \$4335.78 (small 2 person home). In 2019 my electricity cost was \$2961.77. For year ending Dec. 2019 my solar feed to the network gave me \$496.85. Any cost for this level of solar exported to the network would be unfair and ill advised. I strongly urge you to consider a starting point of \$600 before any cost is levied against any solar export to the network but my preference is against the ERC0311 all together. Most Sincerely David Worth
